4. New Aqua Mix® Products Address Grout Haze

Custom® Building Products, the leading provider of flooring preparation products and tile and stone installation systems, recently strengthened its line of award-winning Aqua Mix® tile and stone care products with a focus on grout haze prevention and removal. In addition to updating its Aqua Mix® Grout Release, CUSTOM® has introduced Aqua® Mix Cement Grout Haze Remover and Aqua® Mix Non-Cement Grout Haze Remover to help installers avoid or address costly and time consuming call backs associated with grout residue on tile and stone.

Aqua Mix Cement Grout Haze Remover is used to clean cementitious grout residue as well as hard water stains, rust stains, efflorescence and lime deposits on natural stone, ceramic, porcelain and other acid-resistant tiles. A companion product, Aqua Mix Non-Cement Grout Haze Remover, is ideal for cleaning non-cementitious grout haze including Single Component, pre-mixed, urethane and light epoxy from natural stone and standard tile. Both products are easy to use and reduce the time required to clean tile after grout haze has occurred.

Reformulated Aqua Mix Grout Release is a temporary, water soluble, pre-grout coating that serves as a protective layer between the tile and grout, making cleanup easier on both horizontal and vertical surfaces. The new, thicker formula Aqua Mix Grout Release has greater viscosity and better coverage making it ideal for preventing grout haze on even the most highly susceptible textured or porous tile and stone. It's also useful at minimizing picture framing when only spreading grout over joints on larger tiles.

5. Supreme Green Hybrid

DriTac 7800 - Supreme Green - Hybrid Polymer

Features:

- 5-in-1 Single Component Adhesive System
- Easy to Clean When Wet or Dry
- Saves Time and Labor

6. Dur-A-Flex Launches Game-Changing New Product

Dur-A-Flex, Inc., a leading manufacturer of commercial, industrial and institutional seamless, resinous floor and wall systems, has expanded its Accelera Fast-Track Flooring family with the introduction of Accelera S. The most revolutionary product of the Accelera family to date, Accelera S is a smooth, high-gloss floor system consisting of two coats of a single pigmented material, each coat offering cure times as fast as 2 hours. Accelera S replaces the customary primer, base coat and topcoat, three-day process of the past and allows contractors to complete a full floor system, prep through topcoat, in as little as a single day. This groundbreaking new floor system is bound to transform the industry by allowing resinous floors to be installed in a timeframe that was previously unattainable, all with low odor.

Accelera S is an extension of the Accelera Fast-track flooring family. A proven technology with three years in the industry and over one million square feet already installed, Accelera has become the go-to choice for critical facilities such as pharmaceutical and healthcare operations that need a superior floor system without halting operations. By using Accelera, contractors no longer need to schedule lengthy project timelines due to the 8-12 hour cure times historically seen with epoxy. Accelera's low odor paired with its lightning-quick turnaround time, minimizes or eliminates interruption to business in the facilities where it's being installed and that serves as a winning solution when presented to end-users and architects alike.
