

The new Timberline product by Taylor Adhesives is a moisture-cured urethane adhesive for hardwood flooring.

DriTac 9500 Ultra is a “green” adhesive for wood flooring, containing rapidly renewable and sustainable raw materials and helps contribute to LEED credits.

No matter the flooring category, adhesives are imperative to make an installation solid and sturdy. Adhesives are necessary for ensuring that elements of the flooring installation are strongly bonded together and will not subside overtime. Adhesives even help the floor stand up to heavy foot traffic, and can help with sound absorption.

The adhesive category has even seen significant growth in the past few years, with innovations in technology and chemistry taking the category further. Now, some adhesives are even available in a spray format to make application easier and quicker. And sustainability is top of mind for suppliers who are making great strides when it comes to environmentally safe products.
